

DENIS TERESHCHENKO

 github.com/dotereshchenko |  dotereshchenko@hse.ru |  [@Denis641](https://t.me/Denis641)

WORK EXPERIENCE

Huawei | *Middle NLP Researcher*

Dec 2023 – Present

- Development of efficient retrieval systems for code search and generation, improving code relevance metrics
- Model optimization using LongRope and interpolational positional embeddings for long-context processing
- Successful fine-tuning of encoder/bi-encoder architectures on specialized code datasets
- Implementation of DeepSpeed and Accelerate for performance optimization in training/inference
- Research and application of model optimization techniques: distillation, pruning, quantization
- Development of custom library for distributed learning (contrastive learning, hard negative mining)
- Creation of code quality assessment methodology for RAG-based code generation systems

HSE University, Bioinformatics Lab | *Researcher*

Jan 2024 – Present

- Development of diffusion models for protein conformation landscape modeling
- Creation of ML pipelines for biomolecular data processing and analysis

VK: (Project based) | *Computer Vision Research Engineer for Template video generation*

Mar 2024 – Jul 2024

- Research and implementation of temporal consistency improvement methods in generative video models
- Development of text-to-video clip generation prototype integrated with VK ecosystem
- Optimization of inference pipeline for efficient GPU resource utilization

getzen.dev | *NLP Engineer*

Feb 2023 – May 2023

- Development of MVP agent system for automated generation and cloud deployment of Streamlit dashboards
- Integration of LLM-based code generation model with GitHub OAuth authentication system
- Creation of user-friendly interface for managing generated applications

EDUCATION

National Research University Higher School of Economics

2024 – 2027

PhD in Machine Learning and Artificial Intelligence

National Research University Higher School of Economics

2022 – 2024

Master's in Machine Learning and Data Analysis

TECHNICAL SKILLS

Hard Skills: Calculus Optimization Methods Probability Theory Algorithms I, II RL NLP CV

Programming Languages: Python C++ (A2-B1) LaTeX

ML & DL: PyTorch DeepSpeed Accelerate ONNX Transformers Optimum

Data Processing: NumPy Pandas OpenCV

Frameworks: LangChain FastAPI Streamlit Gradio pySpark Letta Llama.cpp

Tools: Git/GitHub Shell Docker

Soft Skills:

Technical Leadership Cross-functional Collaboration Mentoring Research Methodology
